

Odin TeleSystems Inc.

*Open Telecom for
Open Minds*

Odin TeleSystems Inc. specializes in manufacturing, design, and sale of OEM-subsystems for the telecommunications industry. Odin's award-winning products represents outstanding cost/performance value for today's service providers and telecom equipment manufacturers. Innovative and flexible systems enable service providers and equipment manufacturers to provide reliable and leading-edge communications services and products for Voice over IP (VoIP), T1/E1, Integrated Services Digital Networks (ISDN), Frame Relay, Signaling System Number 7 (SS#7), and Digital Wireless (e.g. GSM and 3G).

Odin's product line includes the OTX (Odin Telecom frameworX) Computer Telephony development platform. The OTX platform provides interchangeable software and hardware building blocks such as a modular telecom adapter family for PCI/PCIe/H.100 systems as well as a variety of software modules for protocol stacks, DSP algorithms, etc. Odin also offers PCI-Express/54 and PCMCIA adapters for laptop-based T1/E1 and ISDN systems.

Odin's products are designed and developed in the heart of the Telecom Corridor in Richardson, Texas, from where the products are delivered to OEM and VAR customers all over the world. Our expertise in networks, switching systems is also available for custom solutions and consulting.

So for the best in Digital Media and Internet telephony applications, the Odin product family — delivers economy, value, and performance.

Company Profile

*PCI, PCIe, PCI04+, PCI-Express/54 and PCMCIA Adapters for
TDM and Packet Data/Voice Communications*
